Dimmability

The LED-Lamps can be dimmed in a range of 10%-100 %. A general compatibility to all dimmers can't be granted. A list of recommended dimmers can be found on our website www.toshiba.eu/lighting.

Important notes

LED lamps are not resistive loads for the dimmers and therefore the power rating of the dimmer can't be directly converted. Incompatibilities between LED lamp and dimmer are expressed as flickering and restrictions in the dimming range.

* Some dimmers may cause flickering and no dimming at lower level. When the dimmer is connected to numerous lamps, it may not be possible to dim the light to the lowest possible levels. Respective timing on dimming each lamp may differ. When turning on the lamp from 100% dimming, the lamp may not turn back on. Increase dimmer to higher level until lamp turns on.
